

Table 7.42 updated

Selected Chronic and Other Health Conditions (Prevalence per 1,000) for Native Hawaiians (AGE ADJUSTED): 2004-2009.

• Age-adjustment is a technique used to eliminate the effect of the age distribution of the population on mortality or morbidity rates. Since the frequency of mortality or morbidity varies with age, a measure free of the influences of population composition is needed to make comparisons between areas or over time.
