* Not otherwise specified (NOS)
^ ^ Data not presented for fewer than 5 cases in the 6 year time period.
--- No cases.
Liver includes hepatic bile duct.
Rates are per 100,000 and are age-adjusted to the 2000 U.S. standard population.
Invasive cases only; Counts are 6 year average annual, rounded to the nearest whole and rate

What are Cancer Incidence & Mortality Rates?
Cancer incidence rates are measures of the risk of being diagnosed with cancer among the state’s general population, while mortality rates are measures of the risk of dying among the state’s general population. Cancer rates in this document represent the number of new cases of cancer per 100,000 population (incidence) or the number of cancer deaths per 100,000 population (mortality) during a specific time period.
